Missing Reference Search

Contact Information for support@jwellone.co.jp

Table of contents

1. Opening a window

・"Tools > jwellone > Window > MissingReferencesWindow" choose.
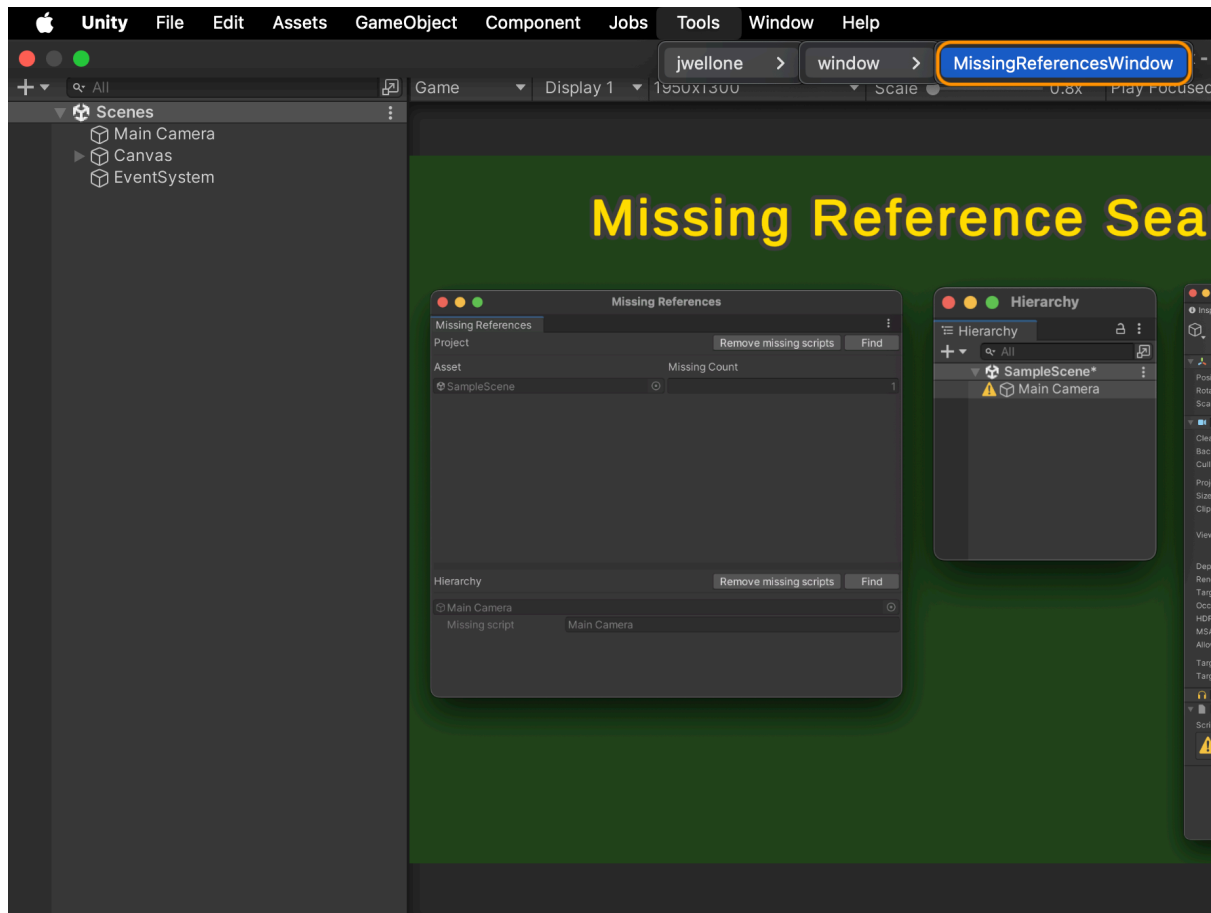

2. How to use

Pressing the Find button will display the references for the missing objects.

Can search within the Project folder or within the Hierarchy.

Selecting a displayed item selects the file or object.

If a script is missing, you can detach the attached script by pressing the Remove missing scripts button.

After resolving the missing items, you can press the Find button again to check that no more items are missing.
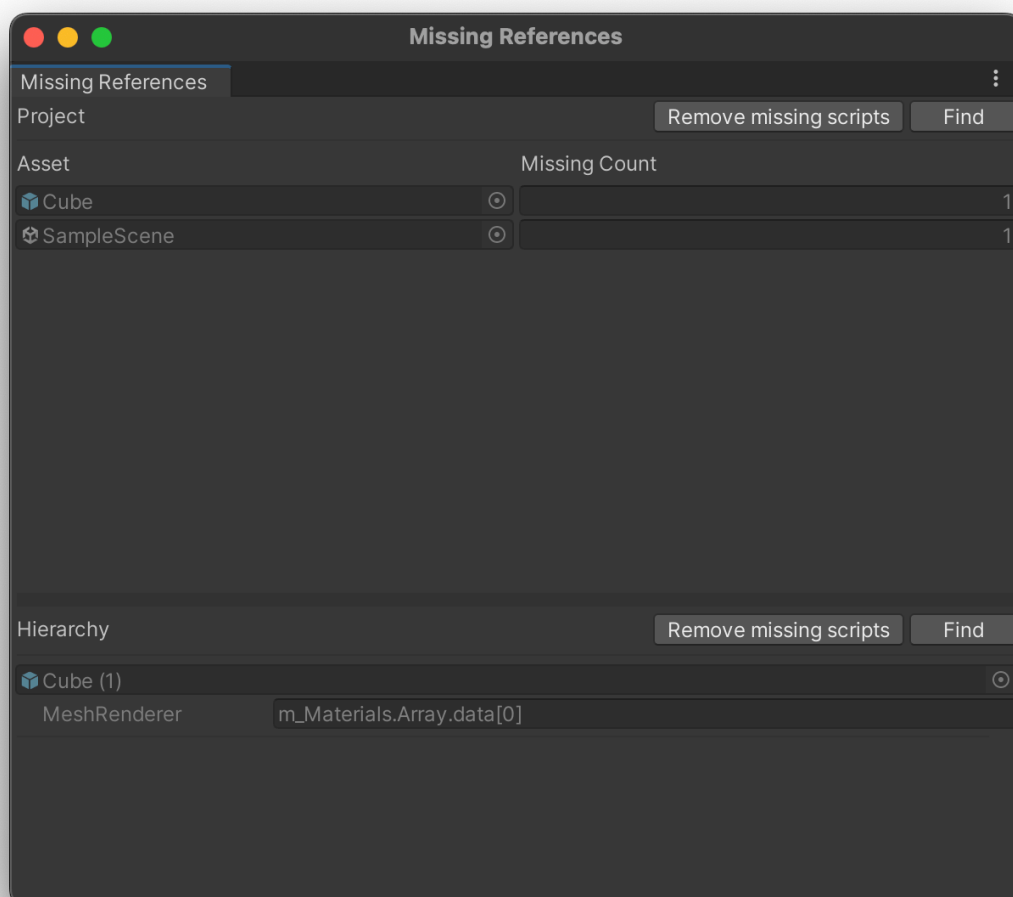

3. Consultation

If something is missing in Hirarchy, an exclamation mark icon will be displayed. The icon will disappear if you resolve the missing item.
